

Lucina

Magnetic wearable light

Design: Pizzolorusso

Graphics: www.alvvino.org

We wanted a light with the same magic as Lucetta, but wearable: a simple and secure magnetic fastening system for any kind of garment and fabric and a light that makes the wearer visible without being dazzling. Lucina is the result of this research!

Pizzolorusso

Lucetta's little sister, Lucina is a wearable light. Small and compact, a simple rounded shape, a garment "button".

It's very useful to be seen while walking or running, in town or out of town. Consisting in two magnetic parts, one of which lights up, it is simple to use: the magnets fasten it securely to any garment or to a handbag or backpack. The special little cord that connects Lucina's two parts adds a sophisticated touch. The light turns on by pushing the button; the user can choose between two types of light: steady and flashing.

*Everyone wants to wear a little light.
Because in town we don't always
ride a bike we often walk, we also
run and hike.
A light to wear is just what we
would like. The perfect dress
for such a beautiful night.*

Lighting modes

steady light / flashing

Light intensity

15000 mcd

Flashing mode

60 flashes/minute

Power supply

2xCR2032 batteries (included)

Battery run time

± 30hours

Weather-resistant
